CHAPTER I

1 INTRODUCTION AND OBJECTIVES OF THE SURVEY

1.1 INTRODUCTION

Agriculture is a dominant sector of Ethiopian economy which makes a lion share contribution to the Gross Domestic Product, employment and foreign exchange earnings. Agriculture is still believed to remain a sector that plays an important role in stimulating the overall economic development of the country in the years to come. This would be realized if and only if strenuous efforts are made by the government and other concerned stakeholders including farmers to increase agricultural production and productivity. Several factors can influence agricultural production and productivity improvement. Among other factors, the increased use of modern farm inputs, modernization of farming activities by using improved farm implements as well as introduction of modern farming technologies to the sector are the major ones. In order identify, plan, implement and monitor agricultural projects and programs, availability of reliable, comprehensive and timely statistical data on the overall performance of the sector is essential.

Central Statistical Agency (CSA) of Ethiopia has been conducting integrated annual agricultural sample surveys and has been providing the survey results to the ultimate data users for more than three decades. Out of the annual agricultural sample surveys carried out by the CSA, Belg season agricultural sample survey is the one that generates data on crop cultivated area, production and farm management practice for the major Belg season crops for the private peasant holdings annually. In the previous years, two reports were used to be generated from the Belg agricultural sample survey nearly simultaneously which are named as a report on area and production and report on farm management practices. Since the year 2013/14 (2006 E.C.), the Belg season agricultural sample survey findings are compiled and produced in only one report with the basic idea of making the report user friendly and handy. The report contained the data on crop cultivated area and production as well as farm management practices of the private peasant holdings of the

major Belg crops. The findings of the 2015/16 (2008 E.C) Belg survey are summarized and presented using tables and graphs at national and regional levels.

1.2 OBJECTIVES OF THE SURVEY

There are two main objectives of the 2015/16 (2008 E.C.) Belg season agricultural sample survey. These are to generate basic quantitative information on:

- Crop cultivated area, production and yield of major Belg season crops and
- The use of different farm management practices that includes fertilizer applied area by crop type, the type and quantity of fertilizers used, areas applied with improved seeds and indigeneous seeds, areas applied with pesticide, areas under irrigation, and areas under extension package by crop type and category.

Given the objectives, the survey findings are presented in such a way that, first crop cultivated area and production is discussed and then followed by farm management practice findings, subsequently.

CHAPTER II

2 SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING

2.1 COVERAGE

The 2015/16 (2008 Annual Agricultural Sample Survey of the Belg season covered the entire rural parts of the country except the non-sedentary population of the three zones of Afar and six zones of Somali regions. Accordingly, all parts of Harari, Dire Dawa as well as 60 Zones (Special Weredas that are treated as Zones of other regions) are also considered in the survey. The survey was planned to cover a total of nearly 1,300 Enumeration Areas (EAs). However, in 286 EAs among the selected EAs, the survey was not successful due to various reasons. Therefore, the survey was successfully accomplished involving only 1,263 EAs.

2.2 SAMPLING FRAME

The list of Enumeration Areas (EAs) was obtained from the 2007 Population and Housing Census. From the list of the EAs, a set of sampled EAs were selected based on the sample design proposed for the survey. Once the selection of the sampled EAs was accomplished, a fresh list of households within each selected EA was carried out. The list of agricultural households in each EA was used as a sampling frame from which the agricultural households are finally selected as sources of data.

2.3 SAMPLE DESIGN AND SELECTION SCHEME

In order to select the survey sample, a stratified two-stage cluster sample design was implemented. Enumeration areas are the primary sampling units (PSUs) whereas the agricultural households are the Secondary Sampling Units (SSUs). The sample size for the 2015/16 agricultural sample survey was determined by considering both the required level

of precision for the most important estimates within each domain and the amount of resources allocated to the survey. In order to reduce the non-sampling errors, considerable effort was allocated to manage the survey in terms of quality and operational control. With the exception of Harari, and Dire Dawa, each region was taken to be the domain of estimation. Each zone of the regions / special woredas was adopted as a stratum for which major findings of the survey are reported.

Enumeration areas from each stratum were selected systematically using a probability proportional to size sampling technique; size being the number of agricultural households. From the fresh list of households prepared at the beginning of the survey, 30 agricultural households within each sampled EA are selected systematically. The estimation procedures of totals, ratios, sampling error and the measurements of precision of estimates (CV) of the survey are given in Appendix-I, II and III.

2.4 FIELD ORGANIZATION

The Central Statistical Agency (CSA) has 25 statistical branch offices located in different parts of the country. Each branch office has its respective branch head, field supervisors, enumerators, other supporting staffs and drivers. By the year 2015/16 (2008 E.C.), 22 Branch offices are involved in the field operation activities of agricultural sample survey of the Belg season. In order to accomplish the data collection activities, field enumerators are equipped with the necessary survey equipments such as GPS, compass, programmable calculator, measuring tape, questionnaire, ...etc. To facilitate the field work of data collection and for field supervision, the branch offices used the available four-wheel drive vehicles. The Addis Ababa, Jigjiga and Shire statistical branch offices did not take part on the 2015/16 (2008 E.C) Belg season agricultural sample survey as Belg season farming activities by smallholder private holdings are not practiced in the EAs of the branch offices.

2.5 TRAINING OF THE FIELD STAFF

At the beginning of the survey year, the field staff-training program was carried out for the survey in two-stages. The first stage training was the training of the trainers which was carried out at Bahir Dar City for six consecutive days. In the first stage training, the trainers were the staff from the head office while the trainees were branch statistical office heads, statisticians and some field supervisors. The manpower trained in the first stage inturn provided similar trainings for the enumerators and field supervisors for 20 days in the Statistical Branch Offices at the second stage training. During the second-stage training, the trainee were given detailed classroom training on the objectives and uses of the Agricultural Sample Survey (AgSS), concepts and definitions of terms used, the method of area measurement, interviewing procedures,... etc. The second stage training also included a field practice to reinforce the procedures discussed in the classroom, to identify the boundaries of the households included in the EAs and to practice interviewing, area measurement using GPS and compass rope techniques, etc.

2.6 METHODS OF DATA COLLECTION

The agricultural data for 2015/16 Belg season crops were collected from the selected rural agricultural households by interviewing the respondents (subjectively) supported by questionnaire and by measuring physically (objectively) the farm fields (areas) for the selected agricultural households using the equipments such as GPS, compass and measuring tape.

A major characteristic of Ethiopian agriculture is the existence of two well-known crop production seasons named as Meher (main) and Belg (short rain) seasons. Meher is a long rainy season which normally occurs from June to September. The Belg season most often refers to small rainy season which normally occurs from February to May mostly in limited areas of the country. Generally, the Meher season rain provides ideal crop growing moisture for the longer maturing crops.

A point of contention arises with respect to the pure definition of Belg crops. Belg cropping practices are heterogeneous across different parts of the country. The nature of the sowing period also overlaps with some of the Meher season crops. Consequently, the report on Belg Season crops in the past faced a problem of a clearly defined growing period. To help clarify the two-crop season, the following definitions have been used since 1987/88: Belg Season Crops are defined as crops that are harvested during the months of March to August, while crops that are harvested during September to February are considered as Meher season crops.

The time period for data collection on area, production and agricultural practices of the Belg season was from April 15 to May 30/2008 E.C. (May 23 to June 7, 2016). Crop cultivated area data are collected objectively using compass/GPS and measuring tapes, while production data were collected subjective by interviewing the agricultural holders by questionnaire based personal interview. The percentage change of crop yield expected this year relative to the previous year's yield (condition factor) is collected from both agricultural holders and Development Agents (DAs) within each EA to estimate this year's crop yield subjectively. Data on production of Belg season crops are then, computed by the use of the crop cultivated area estimates and the yield data collected from the sampled holders and DAs.

2.7 DATA PROCESSING

a. Editing, Coding and Verification

To insure the quality of the collected data, data editing, coding and verification tasks were conducted at the head office. The number of editors participated in editing was relatively lesser relative to the previous years due to the shortage of data editors and work load of other surveys at the head office during the time of data editing. Therefore, most. In order to publish the result of this survey earlier than it was before and thereby meet the demand of data users some of the data editing, coding and and entry tasks are accomplished at the branch statistical offices.

b. Data Entry, Cleaning and Tabulation

Before starting data entry, computer edit specifications are prepared for use on personal computers and CSPro software was used for the purpose of data consistency checking. The filled in questionnaire data were entered into personal computers by data encoders of CSA through the use of CSPro. The data entry task was accomplished at both the head office and the statistical branch offices (that have fully operational data entry system). After the data entry was accomplished, the data were checked for consistency and cleaned using the data cleaning specifications prepared for this purpose. Finally, tabulation was done on personal computers to produce results as indicated in the tabulation plan.

2.8 BASIC CONCEPTS AND DEFINITIONS

For a better understanding of the data presented in this report, the basic concepts and definitions of some technical terms and terminologies used in the collection of the agricultural sample survey data for 2015/16 (2008 E.C.) Belg season are indicated as follows.

Enumeration Area (EA): An Enumeration Area in the rural parts of the country is a locality that is in most cases less than and in some cases equal to a farmers' association in geographical area and usually it consists of 150 to 200 households.

Household: A household may be either:

- a) A one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi-person household or
- b) A multi-person household, that is, a group of two or more persons who live together and make common provisions for food or other essentials for living. The persons in the group may pool their incomes and have a common budget. They may be related or unrelated persons, or a combination of both. These persons are taken as members of the household.

Agricultural Household: A household is considered as an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in partnership with others.

Holding: A holding is all the land and /or livestock kept, which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, regardless of the title, legal form, size or location.

Holder: A holder is a person who exercises management and control over the operations of the agricultural holding and that makes the major decision regarding the utilization of the available resources. The holder has primary technical and economic responsibility for the holding. The holder may operate the holding directly as an owner or as a manager. Under conditions of traditional agricultural holding, a person may be regarded as a holder when the person operates land or raises livestock in his own right, with or without getting helps from others. In other words, a holder is a person who decides on what, when, where and how to grow crops or raise livestock and the one who has the right to determine the utilization of the products.

Parcel: A parcel of a holding is any piece of land entirely surrounded by land, water, road, forest... etc., which are not part of the holding. A parcel may consist of one or more cadastral units, plots or field adjacent to each other.

Field: A field is defined as any plot of land which is a parcel or part of a parcel under the same or mixed crops or any other form of private holding.

Belg Season Crops: are defined as any temporary crops that are harvested during the months of March (Megabit) to August (Nehase).

Meher Season Crops: are those crops that are harvested during September (Meskerem) to February (Yekatit).

Irrigated area: refers to the area of land that is purposefully and actually provided with water artificially, other than by rain for improving the production of crops. The uncontrolled flooding of land by the over flow of rivers or streams is not categorized as irrigation practice although sometimes farmers use this incidence for crop production.

Improved Seed: is defined as crop variety which gives significantly higher yield, better quality and/or better benefit compared to traditional varieties of seeds and usually produced by the Ethiopian Seed Enterprise (ESE) in Ethiopia.

Fertilizer: refers to anything applied to the soil that is intended to increase the amount of plant nutrients available for crop growth. Fertilizers are usually categorized into two which include natural and chemical fertilizers. Examples of natural fertilizers are farmyard manure and wood ashes while that of the chemical fertilizers are DAP (Di-Ammonium Phosphate) and UREA (Ammonium Nitrate).

Pesticides: Pesticides are chemicals useful for the mitigation, control or elimination of pests which are harmful to crop. Insecticides, herbicides and fungicides are all considered as pesticides.

CHAPTER III

3 SUMMARY OF MAJOR FINDINGS OF THE SURVEY

3.1 AREA AND PRODUCTION

The general overview of the 2015/16 (2008 E.C) Belg season agricultural sample survey estimate indicates a total cropland area estimates of about 2,111,667.03 hectare and production of 56,314,693.05 quintal, which includes grain crops, vegetables and root crops in the estimation. It is important to note that a crop named Mung bean/"Masho" was use to be reported as a cereal crop in the previous reports. In this report it is categorized as a pulse crop which is its proper category. With this background, the main findings of the 2015/16 (2008 E.C.) Belg season crop production sample survey are presented in this Chapter.

3.1.1 Grain Crops: refer to a major crop category that includes cereals, pulses and oilseeds, which are not only the major food crops of country and but also are the main sources of household income and sources of the foreign currency earnings. The 2015/16 (2008 E.C) Belg season agricultural sample survey result indicates that a total land area of about 1,770,993.40 hectare was cultivated by the major Belg crops (grains) from which a total grain production of about 19,085,226.54 quintals was estimated at national level. As compared to the production year of 2014/15 (2007 E.C) grain cultivated area and production have decreased by 50.83% and 113.61%, respectively. Out of the total Belg season grain cropland area and production, cereals accounted for the largest percentage interms of both crop cultivated area and production.

Cereals accounted for about 1,298,973.22 hectares (73.35% of the national Belg grain cropland area) and about 14,823,546.49 quintals (77.67% of the total Belg grain production). Following cereals is pulse crops which accounted for about 436,435.21 hectares (24.64% of the total grain area) and about 4,013,627.28 quintals production (which is 21.03% of the total grain production). Moreover, oilseeds are the other category

of grain crops produced which accounted for an area of 35,584.97 hectares (2.01% of the total grain area) and 248,052.77 quintals of production (1.30% of total grain produced during the Belg season). (For more details, see Summary Table 1).

Summary Table 1: Cropland Area and Production of Major Belg Crops: Private Peasant Holdings, 2015/16 (2008 E.C.), Country Level

Crop Category	Total Cropland Area in		Total Production	
	Hectare	%	In Quintals	%
<i>Cereal.....</i>	1,298,973.22	73.35	14,823,546.49	77.67
<i>Pulses.....</i>	436,435.21	24.64	4,013,627.28	21.03
<i>Oilseeds.....</i>	35,584.97	2.01	248,052.77	1.30
<i>Grain crops.....</i>	1770993.40	100.00	19085226.54	100.00

In order to illustrate the overall performance of the 2015/16 (2008 E.C) crop production year, the total estimated cropland area and production of grain crops for private peasant holders for seasons of Belg, Meher as well as for commercial farms are presented in the Summary Table 2. By the year 2015/16 (2008 E.C) the overall grain cultivated area estimate is about 14,885,697.92 hectare (Meher,Belg and Commercial farms).

Summary Table 2: Summary of National Grain Cropland Area and Production of Meher season, Belg Season and Commercial Farms during 2015/16 (2008 E.C.), Country Level

	Grain crops Area		Grain Production(Qt)	
	Hectare	%	In Quintals	%
<i>Meher season private holdings</i>	12,486,270.87	83.88	266,828,807.04	89.39
<i>Belg season private holdings</i>	1,770,993.41	11.90	19,085,226.55	6.39
<i>Commercial Farms</i>	628,433.64	4.22	12,581,277.90	4.21
<i>Grand total</i>	14,885697.92	100.00	298,495,311.49	100.00

Out of the total grain area estimated, Belg season grain area accounted for about 1,770,993.41 hectares (11.90% of total grain area) where as Meher season grain area accounted for about 12,486,270.87 hectare (83.88% of the total grain area cultivated).

Commercial farms grain cultivated area is about 628,433.64 hectares (4.22% of the total grain area cultivated).

The total grain crops produced during the year 2015/16 (2008 E.C.), amounts 298,495,311.49 quintals which is increased by 2.41% from the 2014/15 (2007 E.C) total production considering Meher, Belg and commercial farms. Meher season, Belg season and commercial farms account for about 266,828,807.04 quintals (89.39%), 19,085,226.55 quintals (6.39%) and 12,581,277.90 quintals (4.21%) of the total grain production, respectively for the year 2015/16 (2008 E.C.).

3.2 ESTIMATES OF THE 2015/16 (2008 E.C) TOTAL CROP LAND AREA AND PRODUCTION OF MAJOR CROPS, MEHER AND BELG SEASONS

For the year 2015/16 (2008 E.C.), the total cropland area cultivated of major crops (grains) of the private peasant holdings during both seasons was estimated to be 14,257,264.26 hectares (commercial not included). Meher season accounts for 12,486,270.86 (87.58%) while Belg season accounts for 1,770,993.40 (12.42%) of grain crops area cultivated during both seasons. The estimated area of grain crops cultivated during both seasons is given in Summary Table 3.

Summary Table 3. Cropland Area under Major Crops for Private Peasant Holdings 2015/16 (2008 E.C.), Both Seasons:
Country Level

<i>Crop Type</i>	<i>Total Grain Cropland Area in Hectares during</i>					
	<i>Meher Season</i>		<i>Belg Season</i>		<i>Both seasons Total</i>	
	<i>Area in Ha</i>	<i>%</i>	<i>Area in Ha</i>	<i>%</i>	<i>Area in Ha</i>	<i>%</i>
<i>Cereal</i>	9,974,316.28	79.88	1,298,973.22	73.35	11,273,289.50	79.07
<i>Pulses</i>	1,652,844.19	13.24	4,364,35.21	24.64	2,089,279.40	14.65
<i>Oilseeds</i>	859,110.39	6.88	355,84.97	2.01	894,695.36	6.28
<i>Total</i>	12,486,270.86	100.00	1,770,993.40	100.00	14,257,264.26	100.00

As indicated in Summary Table 3, cereals accounted for about 9,974,316.28 hectares (79.88% of the total grain cultivated area) while Pulses and Oil crops accounted for about 1,652,844.19 hectare (13.24%) and 859,110.39 hectares (6.88%) of the total grain cropland

area, respectively, in both seasons. Graphical representation of the estimates of total area under major crops for private holdings in Ethiopia for both seasons during 2015/16 (2008 E.C) is indicated using Figure 1 as follows.

Figure 1 shows that out of the total major crops cultivated area by private peasant holdings during both seasons of 2015/16 (2008 E.C.), Belg and Meher seasons account for 12.42% and 87.58%, respectively. Likewise, the overall performance of the major grain crops production estimates for both seasons is illustrated in Summary Table 4.

Summary Table 4. Total Production of Major Crops Harvested by Private Peasant Holdings, 2015/16 (2008 E.C.), Both Seasons: Country Level

<i>Crop Type</i>	<i>Total Production in Quintals, Harvested during</i>					
	Meher Season Production		Belg Season Production		Both seasons Production	
	in Quintals	%	in Quintals	%	in Quintals	%
<i>Cereal</i>	231,287,970.83	86.68	14,823,546.49	77.67	246,111,517.32	86.08
<i>Pulses</i>	27,692,743.11	10.38	4,013,627.28	21.03	31,706,370.39	11.09
<i>Oil crops</i>	7,848,093.10	2.94	248,052.77	1.30	8,096,145.87	2.83
<i>Total</i>	266,828,807.04	100.00	19,085,226.54	100.00	285,914,033.58	100.00

The Summary Table 4 indicate that cereals production accounted for about 246,111,517.32 quintals (86.08% of the total grain crops) produced in both seasons. Pulses and Oil crops account for about 31,706,370.39 quintals (11.09 %) and 8,096,145.87 (2.83%), respectively of the total sum of both seasons.

Moreover, the graphical representation of the estimates of the total production of major crops for private holdings in Ethiopia for both seasons during 2015/16 (2008 E.C.) is indicated using Figure 2 bellow.

Figure 2 indicates that out of the total of major grain crops produced by private peasant holdings during both seasons of 2015/16 (2008 E.C.), Belg accounts for 6.68% (which is about 19,085,226.54 quintals) whereas Meher accounts for 93.32% (about 266,828,807.04 quintals).

3.1.3 Vegetables: holders living near to urban centres largely practice vegetable farming. Vegetable farms are not commonly practiced by the rural private peasant holders which is evidenced by the small volume of production recorded as indicated by the survey result. This is better indicated in Figure 3. Vegetables account about 3.02% of the area under all crops at national level during the Belg season. Out of the total area under vegetables, 75.37% is accounted for Ethiopian Cabbage (See Statistical Table 6).

3.1.4. Root Crops: - Root crops such as onion and garlic are indispensable to improve the taste and scent of the food we eat. Other crops like potatoes, sweet potatoes and taro/ Godere are among the major root crops that are consumed in the country. The economic importances of these crops prompt the peasant farm holders to grow many of the root crops as shown in the survey results. For more details, see the statistical Table 5. Root crops covered nearly 13.12% of the area under all Belg crops in the country (see Figure 3 above).

Potatoes, onion and sweet potatoes accounted for 81.74%, 6.83% and 5.21% of the total root crop area cultivated, respectively. In terms of production, potatoes, onion and sweet potatoes accounted for 83.66%, 3.41% and 8.17% of the total root crop production, respectively.

NOTES:

1. Some estimates in all reporting levels are excluded due to high coefficient of variations. Nevertheless, they are incorporated in the total estimates. Hence the sum of the specific estimates may not be equal to the total estimates.
2. Users are also advised to use those estimates with 30-50% coefficient of variation (CV) cautiously
3. Even though area is reported for some crops in some reporting levels, there might be no production data is available for some crops. Such cases are designated by Not Stated (NS). In all tables, if the data are not available, it is labeled as “-”.

CHAPTER IV

4 FARM MANAGEMENT PRACTISES OF THE 2014/15 (2007 E.C) BELG SEASON

4.1 INTRODUCTION

The observed experiences indicate that farmers' attitude and tendency towards adoption and acceptance of new innovations, modern agricultural techniques and technologies such as the use of fertilizers, irrigation and improved seeds have positive impact on the development of agricultural sector as a whole. In this regard, the extent of adoption of modern agricultural practices such as utilization of fertilizer, irrigation, pesticides and improved seeds by the private peasant farm holders is often used as important indicators for estimating the rate and extent of modern technologies used in the country's agriculture. The magnitude and level modern/improved farm management practices in the agricultural sector are used to be the sole indicators of the transformation rate of the country's traditional agriculture to modern agriculture.

The overview of the 2015/16 (2008 E.C) Belg season farm management practice of the country indicates that the total quantity of chemical fertilizers applied during the season has also decreased by 2.20 % (from 562,423 quintals in 2007 E.C to 550,073 quintals in the 2008 E.C), at national level. The total improved seed applied area increased by morethan 100% (from 57,056 hectares in 2007 E.C to about 123,871 hectares in 2008 E.C). Interm of quantity, the total improved seeds applied has increased by about 95% which is a change from 18,994 quintals in 2007 E.C to 37,128 quintals in 2008 E.C).

Given this background, in Chapter four, the quantitative information about the use of modern agricultural inputs for Belg season crops of 2015/16 (2008 E.C.) of the private peasant holdings are presented both at country and regional levels. Furthermore, the general composition of the farm holders surveyed applying inputs interms of age group, holders applying inputs by educational status and the number of holders and the damaged crop land area in hectare are summarized and and presented in this Chapter. The data are generated from the findings of Belg season agricultural sample survey conducted by the Central Statistical Agency of Ethiopia in May 2016.

4.2 SUMMARY OF THE FARM MANAGEMENT PRACTICES OF THE 2014/15 (2007 E.C) BELG SEASON AGRICULTURAL SAMPLE SURVEY

According to the 2015/16 (2008 E.C.) Belg Season Crop Production Sample Survey, total cropland area estimated is about 2,111,667 hectares of land while the estimated number of holders engaged in crop production activity is about 13,497,903 at national level. For more illustration see summary Table 6 below.

Table 6. Total Cropland Area and Number of Holders Engaged in 2015/16 (2008 E.C.) Belg Season Crop Production

Total Belg Cropland Area in Hectare	2,111,667
Number of Belg Crop Producing Holders	13,497,903
Improved Farm Management practiced Area (in Hectare)	1,282,316
Quantity of Commercial Fertilizer Applied (Quintals)	550,073

As indicated Table 6, during 2015/16 (2008 E.C.), out of the total area under Belg season crops, 1,282,316 hectares (39.27% of the total cropland area) was under the use of improved farm management practices that includes fertilizer, improved seed, pesticides, irrigation and extension services. Moreover, it was estimated that about 550,073 quintals of chemical fertilizer was utilized for crop production nationally. The total cropland areas categorized into different types of farm management practices for the season are summarized in Table 7 below.

Table 7. Belg Season Cropland Area under Different Farm Management Practices for Production Year of 2015/16 (2008 E.C), National Level

Farm Management Practice Category	Cropland Area Under Different Farm Management Practices (Hectare)	Percentage from Total Cropland Area
Fertilizer	952,769	45.12
Improved Seeds	123,871	5.87
Pesticides	171,286	8.11
Irrigation	158,248	7.49
Extension	360,428	17.07

As shown in Table 7 above, the total crop land area estimated is 952,769 Hectare for fertilizer, 123,871 Hectare for improved seed, 171,286 Hectare for pesticide, 158,248 Hectare for irrigation and 360,428 Hectare for extension. Out of the total Belg cropland area, the percentage distribution is 45.12% for fertilizer, 5.87% for improved seed, 8.11% for pesticides, 7.49% for irrigation and 17.07% for extension services. Furthermore, the survey findings indicate that cereals account for the largest share of the different farm management practices observed as summarized in Table 8.

Table 8. Summary of Cropland Area under Improved Farm Management Practices for Private Peasant Holdings, 2015/16 (2008 E.C.) Belg season, National

Crop Category	Cropland Area			
	Total Area		Area under Improved Farm Management Practice.	
	Hectare	%	Hectare	% (of Total)
Cereals	1,298,973.22	61.51	806,207.00	38.18
Pulses	436,435.21	20.67	177,139.00	8.39
Oil crops	35,584.97	1.69	4,124.00	0.20
Vegetables	63,673.53	3.02	36,764.00	1.74
Root Crops	277,000.10	13.12	258,676.00	12.25
Total	2,111,667.03	100.00	1,282,316.00	60.73

As indicated in summary Table 8 above, estimates of total cropland area under different farm management practices shows that cereals accounted 1,298,973 hectares (61.51 % of the total all cropland area), followed by pulses with 436,435 hectares (20.67 % from the total all cropp land area). Root crops, vegetables and oil crops accounted for 277,000 hectare (13.12 %), 63,674 hectares (3.02 %) and 35,585 hectare (1.69 %), respectively. Out of the total cereal cultivated cropland area, 806,207 hectare (38.18% of the total cropland area) is cultivated with improved farm management practices (includes all fertilizer, improved seed, pesticides and irrigation). The respective numbers are 177,139 hectare (8.39%) for pulses, 4,124 hectare (0.20%) for oil crops. The corresponding figures for vegetables and root crops can be refered from are 36,764 hectare (1.74%) and 258,676 hectare (12.25%) respectively.

4.3 FERTILIZER APPLIED AREA AND FERTILIZER TYPE USED

The results of the survey indicate that Belg season cropland area under both natural and chemical fertilizers were estimated to be 952,769 hectares, covering 45.12% of the total area under Belg seasons crops of the private holdings. The percentage of different fertilizers applied is given using summary Table 9 as follows.

Table 9. Summary of Fertilizer Applied Cropland Area for Private Holdings of 2015/16 (2008 E.C.) Belg season, National

Fertilizer Type	Fertilizer Applied Area		%ge from Total Belg Cropland Area
	Hectare	%ge of Fertilizer Applied Area	
Natural	452,771.00	47.52	21.44
Commercial			
DAP	267,678.00	28.09	12.68
Urea	47,111.00	4.94	2.23
UREA + DAP	154,288.00	16.19	7.31
NPS	29,363.00	3.08	1.39
NPS + UREA	*	*	*
Total	952,769.00	100.00	45.12

As indicated in Summary Table 9, nearly 452,771 hectares (47.52% of the total fertilizer applied cropland area) is applied with natural fertilizer. This accounts 21.44% of the total Belg cropland area. The coverage of chemical fertilizers is estimated to be 499,998 hectares (52.48% from the total fertilizer applied area and 23.68% from the total cropland area). The application of DAP, UREA, the mixture of DAP and Urea (Dap+Urea) and NPS called as commercial fertilizers, constitute 28.09%, 4.94%, 16.19% and 3.08% of the total fertilizer applied cropland area, respectively. The percentages of Dap, Urea, the mixture of Dap and Urea and NPS applied out of the total cropland area of the Belg season are: 12.68%, 2.23%, 7.31% and 1.39 respectively.

4.4 THE USE OF NATURAL FERTLIZER

In general, the application of natural fertilizers for Belg season crops in 2015/16 (2008 E.C.) vary from crop to crop. Of the total area under natural fertilizer, the highest proportion was reported for maize crop, which was estimated at 212,000 hectares (46.82%). The fertilized area (natural fertilizer) under potato stood second with 54,284 hectare (11.99%) while red haricot beans stands third accounting for 49,683 hectare (10.97%) of the total country level natural fertilizer applied of Belg season cropland area.

4.5. THE USE OF COMMERCIAL FERTILIZERS

The total cropland area under commercial fertilizers is about 499,998 hectares (52.48% of total fertilizer applied cropland area), in 2015/16 (2008 E.C.) Belg season. Out of this, DAP is the most used fertilizer which accounted for about 267,678 hectare (53.54% of the commercial fertilizer applied area). The second most applied commercial fertilizer is the mixture of Dap and Urea (DAP+UREA) covering 154,288 hectare (accounting for 30.86%) while the use of Urea stands in the third position applied on 47,111 hectare (9.42%) of the total commercial fertilizer applied area. This is more indicated using Figure 4.

The commercial fertilizers applied area vary between crops. The highest area is reported for maize accounting for 166,743 hectares (33.35%) followed by potatoes which is 105,389 hectares (21.08% of commercial fertilizer applied area), which is more illustrated in the statistical table.

Region-wise, the distribution of both natural and commercial fertilizers applied varies from region to region. For instance, of the total area under both (Natural + Commercial) fertilizers, the highest was reported for S.N.N.P region accounting for nearly 445,850 hectare (46.80% of total fertilized area).

Oromia region accounted for 407,899 hectares (42.81% of the total country level of both natural and commercial fertilizers applied cropland area) while Amhara region accounted nearly 92,303 hectare (9.69%). In terms of quantity, the total commercial fertilizer applied is 550,073 quintals. Out of this, the mixture of DAP and Urea (Dap + Urea) is the most applied commercial fertilizer accounting for 280,301 quintals (56.06%). The percentage distribution of the chemical fertilizer applied during the production season is more indicated by Figure 5.

As indicated in Figure 6, application of DAP is the second most applied fertilizer type which is about 217,987 quintals (43.60%) while NPS is the least type of chemical fertilizer applied accounting about 18,927 quintals (3.79%).

4.6. THE USE OF IMPROVED SEEDS

Better application of improved variety seeds helps to harvest higher yield compared to the use of traditional variety seeds. The survey findings indicate that the total crop area applied with improved seed is nearly 123,871 hectare while total quantity used is 37,128 quintals, at country level. The area applied with improved seed is about 5.87% of the total Belg 2008 E.C cropland area. The total quantity of improved seeds used is nearly 4.25% of the total seeds used during the season.

4.7. NUMBER OF BELG CROP PRODUCING HOLDERS REPORTING THE USE OF IMPROVED FARM MANAGEMENT PRACTICES BY AGE

To easily identify the age category of the holders who used to earn the economic benefits generated from practicing the use of modern farm management practices on their holdings, Belg crop producing holders' have been categorized into nine groups. These are age groups below 18 years, 18 to 20 years, 21 to 24 years, 25 to 29 years, 30 to 39 years, 40 to 49 years, 50 to 59 years, 60 years and above as well as not stated holders groups. The survey result shows that a total of 13,497,903 holders were engaged in the overall Belg season agricultural activities in 2015/16 (2008 E.C.). Accordingly, the category with the largest number of holders is in the age group 30-39, with 3,737,759 holders (which is 27.69% of the total holders). The age group of 40 to 49 stands second with is 3,263,831 holders (24.18% of total holders). The number and percentage distribution of Belg crop producing holders reporting the use of farm inputs by age group for private holding is given in Table 21.

Moreover, 3,782,501 holders (28.02% of total households) used fertilizer and 1,259,187 holders (9.37%) used improved seeds. Likewise, 700,453 holders (5.19%) applied pesticides and 1,001,415 holders (7.42%) used irrigation at national level for 2015/16 (2008 E.C) Belg season, in order to obtain higher crop yield (See Table 21). Generally, nearly 49.96% of the the total holders practiced the use of various farm management practices. The percentages of holder categorized by the use of various modern farm inputs are re-presented using Figure 6.

4.8 NUMBER OF BELG CROP PRODUCING HOLDERS REPORTING THE USE OF IMPROVED FARM MANAGEMENT PRACTICES BY EDUCATIONAL STATUS

Holders educational status play important role in the adoption of new and improved farming technologies. Therefore, in this report, an attempt is made to categorize holders reporting the use of modern farming practices during the 2015/16 (2008 E.C) Belg season crop production based on their educational status. Based on their education level, holders are categorized in to eight groups consisting of illiterate, literate, grade 1 to 3, grade 4 to 6, grade 7 to 8, grade 9 to 11, grade 12 complete and above grade. The number of Belg crop producing holders using different farm inputs based on education is graphically presented in Figure 7.

According to the results of the 2015/16 (2008 E.C) Belg season crop production sample survey, out of the total number of holders (13,497,903), the largest category of the holders number is under the illiterate category in which the number of all crop holders is 7,459,168 (which accounts for 55.41% of total holders) (See Figure 8). Under this category, 1,931,243 holder are reported for using fertilizer, 621,358 holders using improved seeds, 360,673 using pesticides and 535,384 using irrigation. The second largest category of the number of holders lies on education level of grade four to six. Within this category, the number of holders reported for using all cropland is 2,134,196. The respective number of holders is 640,599 for fertilizer, 213,195 for improved seeds, 117,507 for pesticides and 140,428 for irrigation in the education category.

4.9 NUMBER OF HOLDERS REPORTING CROP DAMAGE BY CAUSES OF DAMAGE

The total number of Belg crop producing private peasant holders who reported crop damage and the cause of damage during the year 2015/16 (2008 E.C) Belg season are estimated to be about 5,673,200 and the damaged cropland area was estimated to be 283,903 hectares. For illustration purpose, the total cropland area affected by crop damage of different crop types in hectare and the various causes of crop damage are presented graphically in Figure 8.

As indicated in Figure 8, the highest cropland area damaged was reported for cereals which is 142,181 hectares, followed by pulses with about 68,497 hectares and oil crops with 10,202 hectares. With regard to the causes of crop damage, it is reported that 80,894 hectares was damaged due to too much rain.

The second highest cause of crop damage is shortage of rain with estimated crop damaged area of 68,969 hectares while other causes of crop damage stands third position in damaging 33,702 hectare cropland area (For further details, see Figure 8).

National and Regional Statistical Tables of Farm Management Practices

Table 10: Number of Holders, Inputs Applied Area and Quantity of Inputs used in Belg 2008 EC (2015/16 GC) National

APPENDIX I

**Estimation Procedures of Totals,
Ratios and Sampling Errors**

APPENDIX I Estimation Procedures of Totals, Ratios and Sampling Errors

The following formulas were used to estimate total area of land under specific crop and production of specific crop in a stratum.

1. For Estimating Total Area of Land under Specific Crop:

$$\hat{A}_h = \sum_{i=1}^{n_h} W_{hi} \sum_{j=1}^{h_{hi}} a_{hij} = \sum_{i=1}^{n_h} W_{hi} a_{hi}$$

in which, $W_{hi} = \frac{M_h H_{hi}}{n_h m_{hi} h_{hi}}$ is the basic weight.

Where:

h represents the stratum

n_h is the total number of sample EAs successfully covered in the h^{th} stratum.

M_h is the measure of size of the h^{th} stratum as obtained from the sampling frame.

m_{hi} is the measure of size of the i^{th} sample EA in the h^{th} stratum obtained from the sampling frame.

H_{hi} is the total number of agricultural households of the i^{th} sample EA in the h^{th} stratum.

h_{hi} is the number of sample agricultural households successfully covered in the i^{th} sample EA in the h^{th} stratum.

a_{hij} is the value of area for agricultural household j , in the i^{th} EA in the h^{th} stratum under a specific crop.

a_{hi} is the sample total area under specific crop for EA i in stratum h

\hat{A}_h estimate of total area under specific crop in stratum h

2. For Estimating Total Number of Holders :

$$Y_h = \sum_{i=1}^{n_h} W_{hi} H_{hi}$$

in which, $H_{hi} = a_{hi} * \bar{Y}_{hi}$

Where,

\bar{Y}_{hi} is average yield per square meter of a specific crop in the i^{th} EA in the h^{th} stratum.

H_h is estimate of total quantity of production of a specific crop in the h^{th} stratum.

H_{hi} is estimate of total quantity of production under specific crop for EA i in stratum h .

3. Sampling Variance of Estimates:

Sampling variance for the estimate of stratum total of area, production and yield for a specific crop are estimated by the following formulas.

$$Var(\hat{A}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{A}_{hi} - \frac{\hat{A}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{A}_{hij} - \frac{\hat{A}_{hi}}{h_{hi}} \right)^2$$

$$Var(\hat{P}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{P}_{hi} - \frac{\hat{P}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{P}_{hij} - \frac{\hat{P}_{hi}}{h_{hi}} \right)^2$$

Where,

f_h = average first stage probability of selection of EAs within stratum h .

$f_{hi} = \frac{h_{hi}}{H_{hi}}$ = average second stage probability of selection within the i^{th} sample EA in stratum h .

$\hat{A}_{hi}, \hat{P}_{hi}$ are weighted total area and production, respectively, of a specific crop in the i^{th} EA and h^{th} Stratum.

$\hat{A}_{hij}, \hat{P}_{hij}$ are weighted values of area and production, respectively, from j^{th} agricultural household in the i^{th} EA and h^{th} stratum under a specific crop.

Since all strata are independent, the total variance at regional and country level is computed by aggregating the result obtained at Zone/Special Wereda level, i.e.

$$Var(\hat{A}) = \sum_h^L Var(\hat{A}_h), Var(\hat{P}) = \sum_h^L Var(\hat{P}_h)$$

Where, L is the number of strata (Zone/Special Wereda).

In estimating the sampling variance by the above formula, selection of EAs within a stratum is assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplifies the estimation procedure.

4. Coefficient of Variation (CV) of Estimates:

Coefficient of Variation (CV) in percentage of estimate of stratum total of area and production for a specific crop are given by:

$$CV(\hat{A}_h) = \frac{\sqrt{Var(\hat{A}_h)}}{\hat{A}_h} * 100, CV(\hat{P}_h) = \frac{\sqrt{Var(\hat{P}_h)}}{\hat{P}_h} * 100,$$

5. Ninety-five Percent Confidence Interval (CI) of Stratum Total of Area:

$$\hat{A}_h \pm 1.96 * SE(\hat{A}_h) \quad ,$$

Where $SE(\hat{A}_h) = \sqrt{Var(\hat{A}_h)}$ is standard error of the estimate of the stratum total of area.

Estimates of standard error and confidence interval for the other estimates can also be calculated by adopting the above formulas.

APPENDIX II

Standard Errors and Coefficient of Variation for Area and Production

PART II – CROP FIELD / OTHER LAND USE

15		16				17							
SER. NO.		QUESTIONS FOR THE HOLDER				PARCEL NO.		FIELD NO.					
						IS THE FIELD		PURE STAND =1					
						MIXED CROP =2		OTHER LAND USE=3					
						CROP/OTHER NAME		CROP NAME		CROP NAME			
		CODE		CODE		CODE		CODE					
0	1	Ownership Own = 1 Rented in =2 Other =3											
0	2	Is field under Extension Program? Yes =1 No = 2											
0	3	Is Field Irrigated? Yes =1 No =2											
0	4	If Field Irrigated source of water. River =1 Lake =2 Pond =3 Harvested water =4 other =5											
0	5	Percent share of mixed crops											
0	6	Crop growing methods 1=by line 2=by broadcasting											
0	7	Seed / Seedling Type Improved Seed = 1 indigenous seed = 2											
0	8	<i>For Cereals, Pulses & Oilseeds only</i> Quantity of improved seeds used				Kilo	Gram	Kilo	Gram	Kilo	Gram		
0	9	<i>For Cereals, Pulses & Oilseeds only</i> Price of improved seeds used				Birr	Cents	Birr	Cents	Birr	Cents		
1	0	<i>For Cereals, Pulses & Oilseeds only</i> Quantity of indigenous seeds used				Kilo	Gram	Kilo	Gram	Kilo	Gram		
1	1	Was crop damaged? Yes = 1 No =2											
1	2	If yes in question number 10, Cause of damage Code											
1	3	Percent of damaged crop											

1	4	Prevention/precaution measure taken? Yes =1 No =2									
1	5	Type of measure if any? Chemical = 1 Non – chemical = 2 Both = 3									
1	6	Chemical type used if any. Pesticide =1 herbicide =2 Fungicide =3 1&2 = 4 1 & 3 = 5 2 & 3 = 6 All = 7									
1	7	Is Fertilizer Used? Yes =1 No = 2									
1	8	Type of fertilizer used if any? Natural = 1 Chemical = 2 Both = 3									
1	9	If chemical fertilizer used 19.1 Type UREA = 1 DAP = 2 Both = 3									
		19.2 Quantity of chemical fertilizer used					Kilo		Gram		
2	0	If natural fertilizer used, type Manure = 1 Compost = 2 Organic = 3 1 & 2 = 4 1&3 = 5 2 & 3 = 6 All = 7 others = 8									
2	1	Quantity of crop produced in standard/local measurement	Name	Code	Quantity	Name	code	Quantity	Name	Code	Quantity

PART 3A: RESULTS OF AREA MEASUREMENTS using GPS

18	19	20	21	22	23	24	25	
GPS Accuracy during field measure ment	Is the field measured?		yes =1	No =2	→			Comments
	Area of measured field		Is the field Flat =1 Partially Sloppy = 2 Sloppy = 3	Code	If the field covered? None ,1 With plant / permanent crop = 2 With house = 3 Partially covered ,4 Others ,5	Code		
	Area in square meters (Clockwise)	Area in square meters (Anti- Clockwise)						
<i>Field measurement</i>			<i>Date</i>		<i>Month</i>			

PART 3B : RESULTS OF AREA MEASUREMENTS USING COMPASS-ROPE

18	19	20	21	22	23	24	25	26
Is the field measured?		Yes = 1		No = 2		Code →
